

## Simplify AD Transitions

### Advanced Capabilities

- Migrates AD passwords
- Moves SID history
- Manages complex ACL migrations

### Manages All Migration Attributes

- Domain users and local users
- Extended AD properties
- Contacts, Workstations and Servers

### Built-in Analysis and Project Management

- Pre-migration analysis to map your Domain(s)
- Setup phased migration tasks
- Partition tasks for separate Admins
- Validate the accuracy and security of your migration plan before cutover

### Extensive Reporting Features

- Identify empty AD groups for cleanup
- Find inactive accounts for removal
- Identify unused network resources for cleanup
- Includes many more analysis and reporting features

## SMART Active Directory Migrator *Automates the Synchronization, Migration and Restructuring of Active Directory Environments*

*"In order to consolidate our 15 domains successfully, we not only needed a software solution, but with software, expert advice and a step by-step process we were able to seamlessly migrate a very complex and mission critical environment."*

*– Jon Roberts, Project Lead, Provincial Health Services Authority*

Binary Tree's SMART Active Directory Migrator software enables a project team to automate the migration and restructuring of the Active Directory environment while ensuring full coexistence between migrated and un-migrated users. With SMART Active Directory Migrator, end-users can continue working, totally unaware of the migration project. And the administrators can manage the restructuring activities during business hours, instead of the usual nights and weekends.

If your organization is preparing to update, consolidate or restructure your Active Directory environment, SMART Active Directory Migrator provides the capabilities you need to successfully migrate all Active Directory objects, settings, properties, and policies. The product is simple to install in any environment and provides you with a complete solution to manage the entire migration project. SMART Active Directory Migrator will enable you to shorten the timeline for your project and reduce the risks of human error by automating the complex migration processing tasks.

## A Comprehensive Migration

SMART Active Directory Migrator provides complete migration of all relevant objects and properties, even those not accessible by conventional means. Active Directory objects are migrated even if the source and target servers are not connected.

*"Active Directory is a critical component of the Windows platform. During an AD migration project the risks of user disruption are very high. Our SMART Active Directory Migrator software will greatly reduce those risks and subsequently shorten your project timeline by automating the AD migration process."*

*- Vadim Gringolts,  
CTO, Binary Tree*

## No Downtime or Interruptions

SMART Active Directory Migrator allows you to restructure your Active Directory during business hours with no adverse affect on user productivity. End-users can continue working, totally unaware of the migration project and administrators can perform all migration-related tasks during business hours, reducing their workload.

## Full Coexistence

The software maintains transparent interoperability for your users during the migration. The AD environments are continuously synchronized to ensure data integrity and users have access to all network resources regardless of the migration status.

## Analysis and Reporting

SMART Active Directory Migrator gives you complete control over your migration project. The solution includes powerful Active Directory and ACL analysis and reporting capabilities that arm you with the real-time data required to make informed decisions.

## Password Copying

The solution features password copy capabilities that enable administrators to migrate or synchronize Domain or Server local passwords between like user accounts.

## Total Safety and Reversibility

SMART Active Directory Migrator can reverse each step in a migration which guarantees that the system can be safely and reliably restored to its original status after any step.

## Flexible and Customizable

SMART Active Directory Migrator is flexible enough to be used for any migration scenario and can be customized to meet the unique requirements of any organization.

## Solution Requirements

The software can be installed on any Windows Server from Windows 2000 (with Service Pack 2 or later) and above. Some additional requirements for the AD environment to run SMART Active Directory Migrator successfully include the following:

- Establish a 2-way trust between source and target domains
- Admin groups members from source and target domains must be cross-populated
- Enable NetBIOS over IP for both the source and target domain's PDC Emulator
- WINS server must be installed on the target domain PDC Emulator
- Verify that all domain controllers, both source and target, have "Enable lmhost Lookup" configured
